TOKENOMICS

BLOCK AI

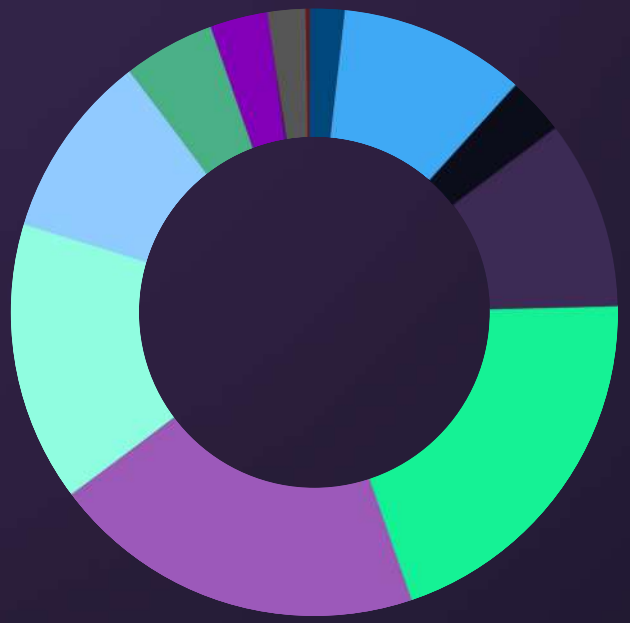
Token Allocation & Vesting Strategy

A comprehensive breakdown of our tokenomics framework designed to ensure sustainable growth, long-term value creation, and balanced stakeholder alignment. This allocation strategy distributes 1 billion tokens across seven strategic categories, each with carefully structured vesting schedules to promote ecosystem stability and discourage short-term speculation.

BLOCK AI

Total Supply Distribution Overview

Our token allocation model strategically distributes the total supply of 1,000,000,000 tokens across key stakeholder groups and functional categories. This balanced approach ensures adequate liquidity for market operations while reserving substantial allocations for community growth, team incentives, and long-term ecosystem development.



- Seed Round
- Private Sale
- Public / IDO
- DEX Liquidity
- CEX Liquidity
- Community Reward
- Ecosystem & Partners
- Strategic Growth
- Team
- Advisors
- Development & Staking
- Treasury

The largest allocations Liquidity & Exchange and Team at 20% and 15% respectively reflect our commitment to both market stability and long-term team alignment. Combined community-focused allocations (Community Rewards, Development, and Ecosystem) represent 45% of total supply, demonstrating our user-first philosophy.

BLOCK AI

Strategic Allocation Breakdown

Community Rewards 150M tokens (15%)

Gradual 24-month distribution for engagement, quests, and ecosystem activities

Liquidity & Exchange 150M tokens (15%)

Fully available at TGE for exchange listings and market liquidity

Ecosystem & Partners 200M tokens (20%)

24-month gradual unlock for partnerships and collaborations

BLOCK AI

Team & Advisor Incentives

Core Team Allocation

100,000,000 tokens (10%)

The team allocation features a conservative vesting structure with a 6-month cliff period, ensuring no tokens are unlocked until month 6. Full vesting occurs at 18-24 months, creating strong long-term alignment between team success and project performance.

- 6-month cliff protects against early departures
- 18-24-month full vesting ensures sustained commitment
- Gradual unlock prevents market supply shocks

Strategic Advisors

30,000,000 tokens (3%)

Advisor tokens recognize strategic guidance with a more accelerated schedule. A 3 month cliff ensures advisor commitment during critical early phases, with full vesting at 12 months to reward ongoing strategic contributions.

- 3-month cliff validates early engagement
- 12-month full vesting for strategic guidance
- Smaller allocation reflects advisory role scope

BLOCK AI

Development & Staking Rewards

Total Allocation

100,000,000 tokens representing 10% of total supply dedicated to product development funding and network staking incentives

Gradual Distribution

Continuous rewards distribution schedule ensures sustainable funding for continuous product improvements and consistent staking rewards for network participants

Dual Purpose

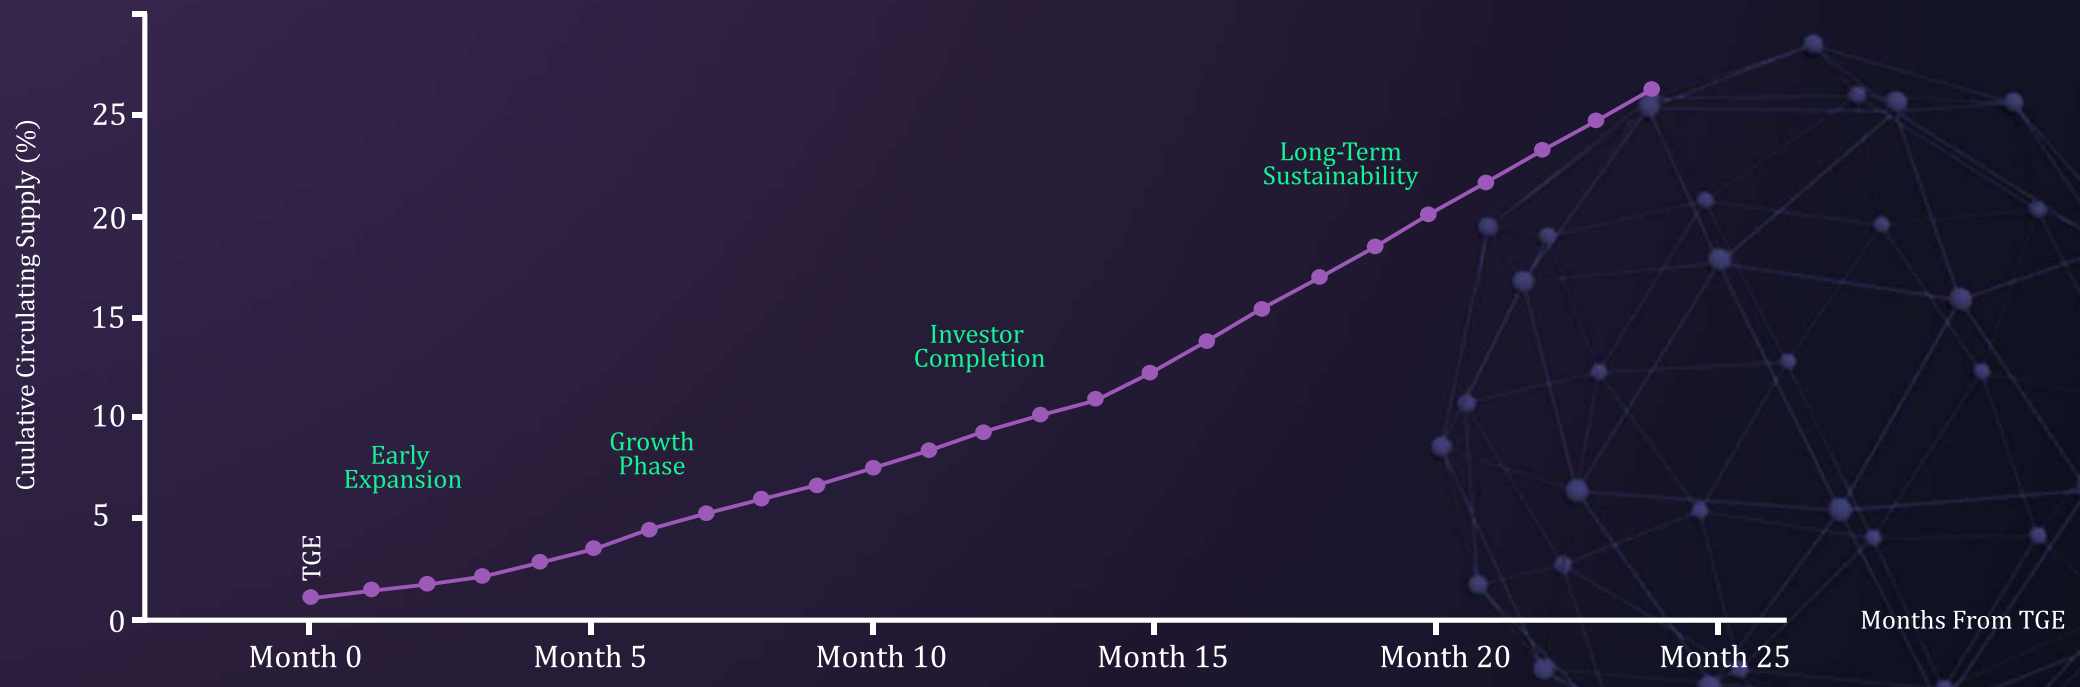
Balances technical innovation funding with user incentives, supporting both infrastructure development and active network participation

This allocation serves a critical dual function: funding ongoing technical development while simultaneously rewarding users who stake tokens to support network security and governance. The gradual unlock prevents concentrated selling pressure while maintaining consistent development resources and staking yield rates throughout the first year

BLOCK AI

Comprehensive Vesting Timeline

Our vesting schedule creates a predictable token unlock pattern that protects market stability while ensuring adequate liquidity for all stakeholders. The timeline below illustrates the progressive unlock percentages across 24 months for team, advisors, development, and staking rewards categories.



The staggered vesting approach ensures continuous liquidity entry while preventing sudden supply shocks that could destabilize token price.

BLOCK AI

Vesting Schedule Deep Dive

Month 0 (TGE)

1

- Seed Round: 10% unlock - 300,000 tokens
- Private Sale: 10% unlock - 2,000,000 tokens
- Public/IDO: 20% unlock - 6,000,000 tokens
- CEX Liquidity: 10,000,000 tokens unlocked for listings
- Strategic Growth: 500,000 tokens initial unlock

Total TGE Circulating Supply: -1.88% of total supply
Listings, initial liquidity, market discovery, community onboarding

2

Months 1-3 (Early Expansion Phase)

- Seed & Private investors enter linear vesting
- Public sale tokens continue linear release (8-month-plan)
- Community Rewards, Ecosystem & Strategic Growth start gradual emissions
- No Team / Advisor unlocks

Focus: Community growth, early adoption, product rollout, ecosystem awareness

BLOCK AI

Month 4-8 (Growth Acceleration)

3

- Public / IDO vesting completes by Month 8
- Seed & Private rounds continue linear vesting
- Community Rewards, Ecosystem, Strategic Growth a
- Development & Staking rewards distributed continuously

Focus: User acquisition, TVL growth, staking incentives, ecosystem awareness

4

Month 9 (Investor Vesting Completion)

- Seed & Private Sale vesting fully completed
- Advisors vesting (12 months) completed
- No sudden unlocks - emissions remain contriled

Focus: Market stability, long-term investor alignment, protocol maturity

5

Months 15-24 (Long-Term Sustainability)

- Team tokens vest linearly (18-24 months)
- Community Rewards fully distributed over 24 months
- Ecosystem, Strategic Growth & Treasury complete gradual release
- All allocations reach full unlock by Month 24

BLOCK AI

Community-First Allocation Model

450M

Community-Focused Tokens

Combined allocation for rewards, airdrops, and ecosystem partnerships

45%

User-Centric Supply

Nearly half of total supply dedicated to community growth and engagement

24

Distribution Period

Months of gradual distribution for sustainable ecosystem development

Our allocation philosophy prioritizes community ownership and long-term ecosystem health. By dedicating 45% of total supply to community rewards, airdrops, and ecosystem partnerships, we ensure that value accrues to active participants rather than being concentrated among insiders. The gradual 12-month distribution schedule for most community allocations prevents dilution while maintaining consistent incentives for user acquisition, retention, and ecosystem contribution. This approach builds a loyal, engaged community that becomes the foundation for sustained project success

BLOCK AI

Anti-Speculation Design Principles

Cliff Periods

6-month team cliff and 3-month advisor cliff prevent early exits and ensure committed participation during critical development phases

Gradual Unlocks

Progressive vesting schedules avoid sudden supply increases that create selling pressure and price volatility

Balanced Liquidity

15% TGE liquidity provides market functionality without excessive initial circulating supply

Protects Token Value

Controlled supply release maintains price stability

Encourages Long-Term Holding

Vesting aligns stakeholder incentives with project success

Supports Ecosystem Growth

Predictable distribution enables strategic planning

BLOCK AI

Tokenomics Summary & Key Takeaways

1

Balanced Distribution

1 billion tokens allocated across seven strategic categories with no single group holding excessive control

2

Community Majority

45% of supply dedicated to community, ensuring decentralized ownership and aligned incentives

3

Strategic Vesting

Cliff periods and gradual unlocks protect against speculation while rewarding long-term commitment

4

Market Stability

Predictable supply schedule enables healthy price discovery and sustainable liquidity management

This tokenomics framework represents a mature, well-considered approach to token distribution that balances the needs of all stakeholders. By prioritizing community ownership, implementing robust vesting schedules, and ensuring adequate liquidity, we've created a foundation for long-term ecosystem sustainability and value creation. The anti-speculation design encourages genuine participation over short-term trading, while the balanced allocation prevents centralization risks that plague many token projects
